

# IPSCOPE: ANALYSIS AND MAPPING TOOL FOR IP NETWORKS

*Innovative tool to provide an overview of an IT network using only a minimum amount of data*

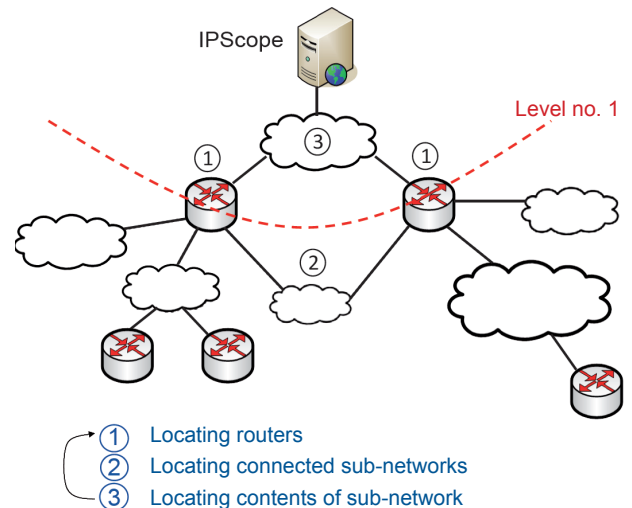

## Technological advantages

### A dynamic, flexible view of the network

Hierarchical organisation in real-time  
A global and detailed view of the network

### A system that improves network management

Simple, intuitive functions  
Better legibility  
Possibility of creating IP networks listings and the machines they comprise, with interconnecting hardware

## Overview of invention

Software suite that provides more detailed information about an IT network via an instantaneous overview at moment 't', which can be used as a document reference, an IP network management tool or a decision-making tool.

The tool provides a stand-alone graphic display, using a minimum amount of data, with level-by-level network mapping.

## Commercial benefits

### A simple, high-quality system

A major time-saver  
Easy to start-up and use  
Accessible to non-experts in network use

### A flexible, high-performance software suite

System compatible with all types of servers  
Can adapt to changing networks (wifi, VPN, etc.)  
Architecture can easily be transferred to other operating systems

### A unique product

Functional prototype is available

## Applications potentielles

Managing IT networks
